

YOU FOUND A BABY SQUIRREL

NUMBER 1 GOAL: REUNITE THE BABY WITH ITS MOTHER – We do not have enough space to raise babies that have been removed prematurely. We only want to help true orphans.

- **DO NOT FEED IT ANYTHING UNTIL YOU HAVE SPOKEN WITH A REHABILITATOR**
- Put it in a box big enough it can't crawl out, but Mom can get in.
- **CHECK FOR INJURIES** Blood, especially from the nose or mouth. Possible broken bones. (In these cases the baby should come into care)
- Eyes closed babies can not regulate their own heat. Provide a temporary heat source. Heated rice in a sock or water bottle with warm water.
- In hot temperatures: **CHECK AND REMOVE** ants, fleas, ticks, fly eggs and maggots. Our every day green and blue bottle flies will lay their eggs on anything alive or dead. **Wash hands after handling.**
- Lightly cover the box with a cloth to keep the flies out.
- **DOWNLOAD FROM YOUTUBE** "Baby squirrel in distress" and put it on your phone as a loop.
- Put the box close to where you found it.
- **STAY AWAY. IF MOM SEES YOU, SHE WILL NOT COME DOWN. NEVER LEAVE OVERNIGHT. SQUIRRELS GO TO BED MID EVENING. BRING THE BABY IN AND TRY AGAIN THE NEXT MORNING.**
- **If no luck reuniting, contact your nearest Authorized Wildlife Rehabilitator. PLEASE DO NOT POST ON FACEBOOK.**
