

YOU FOUND A BABY RACCOON

NUMBER 1 GOAL: REUNITE THE BABY WITH ITS MOTHER – We do not have enough space to raise babies that have been removed prematurely. We only want to help true orphans.

Raccoons are part of the RVS (Rabies Vector Species) Always approach with caution. There are many Zoonotic Diseases <https://www.ccohs.ca/zoonotic-diseases/working-with-wildlife>

****Always ask yourself “Where is the mother?” Where are its siblings?” 4 possible reasons.**

Mom’s nearby and this one’s exploring. Mom & babies have been trapped. Mom’s died from trauma. Mom & siblings have died from illness.

- Call your nearest Authorized Wildlife Rehabilitator for instructions. **DO NOT FEED THE RACCOON ANYTHING UNTIL FURTHER INSTRUCTIONS.**
- CHECK FOR INJURIES AND ANTS, FLEAS, TICKS FLY EGGS.

**** With raccoons, every situation is different and the way to reunite is as unique. Work with a Rehabilitator**
